

## **New products presented by OriginGPS at Embedded World, Nuremberg include a low-profile GPS module, a new-gen dual-frequency GNSS module and a super-mini IoT tracker**

***With a diverse portfolio which includes everything you need to build trackers, OriginGPS will showcase high-performance solutions for a myriad of industries - from fish finders and oil and gas monitors to cargo tracking and gun control.***

**Airport City, ISRAEL — June 20, 2022 —** [OriginGPS](#), the global market leader in miniature [GNSS modules](#) and [cellular IoT systems](#), is back presenting high-performance solutions suited for every type of device designed to monitor and track valuable assets, whether stationary, in motion or both. OriginGPS today offers a broad range of high-efficiency solutions; traditional miniature GNSS modules and cellular IoT systems and devices to dramatically shorten time to market.

Among products exhibited at the show are the 7x7mm ORG4572-MK05 GNSS module with a 10Hz update rate, the new gen dual frequency L1+L5 [ORG4600](#) providing cm level accuracy with RTKLIB and NMEA with raw data in parallel, the world's lowest profile GPS antenna module - the [ORG1511-MK05](#), and a new waterproof super-mini tracker measuring just 4.9x2.7x1.4cm and equipped with magnetic charging.

“When we realized that the component shortage was here to stay a while, we revisited our roadmap and added two GNSS modules - the [ORG1510-MK05](#) and the [ORG4572-MK05](#). These new models, parallel in performance to two of our high runners, are based on available chipsets and boast a lead time of just 12 weeks, we also offer today a similar lead time for our dual frequency module,” stated Amir Benyamini, VP Research and Development of OriginGPS.

OriginGPS will be offering a **10% discount** on first time IoT prototype orders made before 31/12/22 from booth visitors.

**OriginGPS will be showcasing its miniature GNSS modules and cellular IoT systems and devices at Embedded World, Nuremberg, June 21-23 - Booth 5-165, and at Electronica, Munich November 15-18.**

### **About OriginGPS**

OriginGPS develops miniature GNSS and cellular IoT solutions. For over a decade, our experts have been developing ultra-sensitive, reliable, high-performance modules, systems and devices to help monitor and track everything valuable to you and your business. Reducing project costs and dramatically shortening time-to-market, our products are ideal for asset tracking, smart cities, fleet management, precision agriculture, law enforcement, and pet/people tracking apps.
